

How to Enter Fingerprints on the Supertrax Clock

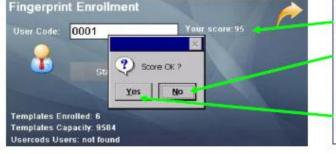

USERCODS not used (default):

After a successful enrollment you can see the capture score. In case of score lower than 99, a prompt asks for a confirmation: should it be lower that 70, or anyway if you realized the "swipe" was not done so well, you can click "No" in the confirmation window and click "Start" again to repeat the process.

Clicking "Yes", if the previous was the first finger enrolled for the selected user code, you will be asked if you want to proceed with another finger for the same user.

6.2 How to read or enroll your finger properly

- Place your finger over the sensor in the position where you can feel the lower edge of the FingerBOX well under your second phalanx.
- Lower your finger, letting it adhere to the biggest possible surface of the sensor.
- Keep the finger still until you see the "Identifying..." / "Verifying..." message on the screen (while the built-in T&A application is running). While enrolling, remove the finger as soon as you see the "PLACE FINGER AGAIN" message, then repeat steps 1-3 until you see the "ENROLLMENT OK!" message.

6.3 Enrolling new fingerprints

Pressing on the Enrollment icon you can enter the panel to record new user's fingerprint. The enrollment panel has two possible variations according to bit.4 of parameter 54 set or not (i.e. using long codes and USERCODS file or not).

Note: current fpreader.dll versions support the enrollment of up to two different fingers for each user (or "usercode"). The number of "templates" stored for each fingerprint is two by default, but it could also be reduced to one (according to the "enroll mode" in the biometric setup, see §6.7).

In case of failed enrollment, you will be asked if you want to retry. After three more failed attempts you will be asked if you want to try with another finger: should you choose "No", you will be asked if you want to exempt the currently selected user code from finger verification. Choosing "Yes" a "Select exempt user method" panel will appear, with two possible options to choose from: "Card only" and "Card or manual digits". Once you have checked your choice press the "Apply" button to proceed: the currently selected user code will be appended to the NOFINGER file (see §6.6.1).
