

How to Setup the iOS Application

Steps

1. Download the application from the app store
2. Set up your users in the Application setup in datamaxx. ([Link to the How to PDF](#))
3. Open the app and click Setup

The screenshot shows the 'Server Configuration' screen in the Data:Maxx app. It features a table with three rows: 'Server Address' with the value 'http://166.78.141.27', 'Device Code' with the value '1002', and 'Device Token' with the value 'LLP5B-AKXUP'. Below the table are two buttons: 'Save' and 'Clear All Data'. A yellow callout box on the right contains instructions: 'Enter the public server IP address & port here. For example http://76.122.78.99:5500', 'Enter the Device Code here', 'Enter The Device Token Here. (take out the spaces)', 'You will find the device code and token in the application setup screen in DatamaxxV7', and 'Click Save'. Three red arrows point from the callout box to the corresponding fields in the table.

Server Configuration	
Server Address	http://166.78.141.27
Device Code	1002
Device Token	LLP5B-AKXUP

Save

Clear All Data

Enter the public server IP address & port here. For example http://76.122.78.99:5500

Enter the Device Code here

Enter The Device Token Here. (take out the spaces)

You will find the device code and token in the application setup screen in DatamaxxV7

Click Save

4. Now you can click download levels and then go into the Labor screen to Clock IN and OUT labor
