

# Data:Maxx™ PDA

*Integrated labor tracking, job, cost, materials, and equipment with ANDROID, iPhone, Blackberry and Windows Technology*

## Powerful Two-way Data Integration

Two-way integration means less work and current, accurate information for your busy supervisors in the field as well as your accounting and payroll staff. Up-to-date drop-down menu information can be transmitted to your PDA/Smartphone device from any Data-Maxx-supported accounting system. When the home office adds new employees, jobs, cost codes, tasks, etc., into the accounting system, that information is collected by Data-Maxx which sends it to your device on the next

Transferring data into your payroll system is also fast and easy. Once you have verified the data in Data-Maxx, the data can be exported into most accounting systems' payroll, equipment, and inventory modules with a few keystrokes. (Data-Maxx supports over 100 of today's most popular accounting software products.) *Data can also be exported into standard text or Excel file formats for transfer into other spreadsheets and various software programs.*

**S**aving time and money, managing complex tasks and jobs, and increasing your company's profitability has never been more important. So, Data-Maxx made it easy by bringing its powerful timekeeping, job, cost, equipment, materials, and inventory tracking and reporting capabilities to your handheld PDA or Smartphone. Now, you get comprehensive data collection and two-way data integration for most PDA/ Smartphone devices equipped with ANDROID, Apple iOS, Blackberry or Windows operating systems.

The Data-Maxx/PDA/Smartphone solution provides powerful two-way data integration with over 100 of today's most popular accounting software packages. You simply bring information over from your accounting system automatically, and on an ongoing basis, as well as sending the information back quickly and easily using the Data-Maxx web services interface.

The user-friendly interface is menu-driven and features pre-defined drop-down lists for labor, equipment, materials, inventory production, and daily reporting. Employees, jobs, and cost codes are also available via drop down lists as are menus that allow you to edit, review, refresh, and transmit information.

“sync”. Updated menu information can also be transferred from Data-Maxx with a refresh feature. Transfer of field data into Data-Maxx is just as easy. Although most transfers occur using the Data-Maxx web services sync, cradles and USB cables are available to transfer data.

## Comprehensive Data Collection

Employee information, jobs, equipment/materials, inventory, and cost codes can be collected and stored directly into your PDA/Smartphone device. Data may be entered by direct key entry, drop-down menus (which can be pre-populated by Data-Maxx), or by scanning in the information with the one-touch IR bar code scanning or RFID capability.

*Most scanning devices employ a laser scan as opposed to a contact scan, so you simply point at the bar code while you are holding the button down to scan the data into the system. Built in bar code readers are available in rugged PDAs and some Smartphones. Check with your DataMaxx consultant concerning bar code scanning capability on particular models.*

In addition, you can also track job and task information such as items, purchase order numbers, etc. Fields are user-definable so you can track up to (9) nine levels of information per transaction in any menu item. For example, you can collect data such as employee no., job no., phase no., and cost code no., etc.

1. BlackBerry Curve 8350i from RIM Ltd. Sprint/Nextel.
2. XG100 Version 2 from Janam.
3. iPAQ PDA from HP.
4. HT Touch Diamond Smartphone. Sprint.
5. BlackBerry Curve 8330 from RIM Ltd. Verizon.
6. Rant Smartphone from Samsung. Sprint.

You can collect data in real-time or after-the-fact at the end of the day. In real-time mode, the PDA/Smartphone device applies the date and time for the arrival, departure, and switching of employees. Employees can switch from job-to-job or task-to-task an unlimited number of times throughout the day. In after-the-fact mode, supervisors can enter or scan bar code information such as employees, jobs, tasks, and hours worked for their employees at the end of the workday. **Crew features** are also available making it easy to track the employees, tasks, and jobs associated with specific work crews. Crew members can be linked together, clocked in, switched, or clocked out in one simple transaction.

Data sent to the device for dropdown lists can be controlled from the office by the device.

*Note: All transactions can be reviewed and edited. Your PDA/Smartphone can be configured with a password to allow or not to allow the editing feature.*

### Up-to-the-minute Reporting

Start using your PDA/Smartphone device to collect and process daily work force information. Data-Maxx provides over 60 reports (many of which are fully customizable) and places important management information at your fingertips such as:

- Time employees arrived and departed from the job, and the jobs/tasks they worked on,
- Time and labor costs,
- Inventory moving in and out of your shop,
- Equipment used on the job and when it was checked in and out,
- Materials placed on the job,
- Production quantities installed on the job, and service work orders.

**Daily Reporting Functionality** currently available from Data-Maxx is now available to your PDA device. This feature provides you with in-the-field comprehensive reporting on equipment, materials used, weather, work performed, subcontractors, extra work, and many other items found in the Daily Report.
