How to Make Commserver Run as a Service

1. Open commserver and click on [options] and check the "install as service" check box.
2. Then Click [Save]
3. Go to Start icon and click on [control panel]
4. Click on [administrative tools]
5. Click on [Services]
6. Select "Commserver Service" and Start if it has not been started already.

7. Right click on "Commserver Service" and select "Properties"
8. Click [Log On]
9. Check "Allow service to interact with desktop"

10. Click [OK]
11. Exit Services
12. Leave Commserver Running when you log off.
