

How to Change Settings On Commserver Service

Open Regedit after you have the settings you like on the Commserver – go to
“Hkey_Current_User\Software\VB and VBA Program Settings\DataMaxx\Site Field Data Collection”

Do a print screen [Alt][PrtScn] or with vista or windows7 use snipping tool. Use the print screen to help you set the Commserver service settings.

For the service settings go to Hkey_Users\DEFAULT\VB and VBA Program Settings\DataMaxx\Site Field Data Collection” and match the settings in the Print Screen

for ID/Name and sorting: 0=ID, 1=Name, 2=Both. The other checks are 0 or 1.
